Easy and Simple Add, Edit, Delete MySQL Table Rows using PHP/MySQLi Tutorial

Submitted by [nurhodelta_17](#) on Saturday, December 19, 2020 - 16:59.

Language

[PHP](#)

The screenshot shows a web browser window with the address bar displaying 'localhost/basic_command/index.php'. Below the address bar, there is a form with two input fields labeled 'Firstname:' and 'Lastname:', followed by a 'Submit' button. Below the form, there is a table with three columns: 'Firstname', 'Lastname', and an empty column. The table contains two rows of data: one with 'neovic' and 'devierte', and another with 'lee' and 'ann'. Each row has a link labeled 'Edit Delete' in the third column.

Firstname	Lastname	
neovic	devierte	Edit Delete
lee	ann	Edit Delete

In this tutorial, I will show you how to create simple add, edit, and delete functions using PHP, MySQLi. This tutorial does not include a good design but will give you an idea of the basic functions in PHP and basic queries in MySQLi.

Creating our Database

1. First, we're going to create a database that contains our data.
2. Open **phpMyAdmin**.
3. Click databases, create a database, and name it as "basic_command".
4. After creating a database, click the SQL and paste the below code. See the image below for detailed instructions.

```
1. CREATE TABLE `user` (  
2.   `userid` INT(11) NOT NULL AUTO_INCREMENT,  
3.   `firstname` VARCHAR(30) NOT NULL,  
4.   `lastname` VARCHAR(30) NOT NULL,  
5.   PRIMARY KEY (`userid`)  
6. ) ENGINE=InnoDB DEFAULT CHARSET=latin1;
```

Creating our Connection

The next step is to create a database connection and save it as "**conn.php**". This file will serve as our bridge between our form and our database. To create the file, open your HTML code editor and paste the code below after the tag.

```

1. <?php
2. $conn = mysqli_connect("localhost","root","","basic_command")
3. ;
4. // Check connection
5. if (mysqli_connect_errno())
6. {
7.     echo "Failed to connect to MySQL:
8.     " . mysqli_connect_error();
9. }
10. ?>

```

Creating our Table and Add Form

Then, we will create our table and **"add form"** and name it as **"index.php"**. This table will show the data in our database and the add form will add rows to our database. To create the table and form, open your HTML code editor and paste the code below after the tag.

```

1. <!DOCTYPE html>
2. <html>
3. <head>
4. <title>Basic MySQLi Commands</title>
5. </head>
6. <body>
7.     <div>
8.         <form method="POST" action="add.php">
9.             <label>Firstname:</label><input
10.             type="text" name="firstname">
11.             <label>Lastname:</label><input
12.             type="text" name="lastname">
13.             <input type="submit" name="add">
14.         </form>
15.     </div>
16.     <br>
17.     <div>
18.         <table border="1">
19.             <thead>
20.                 <th>Firstname</th>
21.                 <th>Lastname</th>
22.                 <th></th>
23.             </thead>
24.             <tbody>
25.                 <?php
26.                     include('conn.php');

```

```

25.                                     $query=mysqli_query(
    $conn,"select * from `user`");
26.                                     while($row=mysqli fe
    tch_array($query)){
27.                                     ?>
28.                                     <tr>
29.                                     <td>
    <?php echo $row['firstname']; ?></td>
30.                                     <td>
    <?php echo $row['lastname']; ?></td>
31.                                     <td>
32.
    <a
    href="edit.php?id=<?php echo $row['userid']; ?>">Edit</a>
33.
    <a
    href="delete.php?id=<?php echo $row['userid']; ?>">Delete</a>
34.                                     </td>
    >
35.                                     </tr>
36.                                     <?php
37.                                     }
38.                                     ?>
39.                                     </tbody>
40.                                     </table>
41.                                </div>
42.</body>
43.</html>

```

Creating our Add Script

This script will add the data inputted by the user to our database upon submission and we name it as "add.php". To create the script, open your HTML code editor and paste the code below after the tag.

```

1. <?php
2.     include('conn.php');
3.
4.     $firstname=$_POST['firstname'];
5.     $lastname=$_POST['lastname'];
6.
7.     mysqli_query($conn,"insert into `user`
    (firstname,lastname) values ('$firstname','$lastname')");
8.     header('location:index.php');
9.

```

Creating our Edit Form

This form will enable the user to edit the selected row. We name this form as **"edit.php"**. To create the form, open your HTML code editor and paste the code below after the tag.

```

1. <?php
2.     include('conn.php');
3.     $id=$_GET['id'];
4.     $query=mysqli_query($conn,"select * from `user` where
   userid='$id'");
5.     $row=mysqli_fetch_array($query);
6. ?>
7. <!DOCTYPE html>
8. <html>
9. <head>
10. <title>Basic MySQLi Commands</title>
11. </head>
12. <body>
13.     <h2>Edit</h2>
14.     <form method="POST"
   action="update.php?id=<?php echo $id; ?>">
15.         <label>Firstname:</label><input type="text"
   value="<?php echo $row['firstname']; ?>" name="firstname">
16.         <label>Lastname:</label><input type="text"
   value="<?php echo $row['lastname']; ?>" name="lastname">
17.         <input type="submit" name="submit">
18.         <a href="index.php">Back</a>
19.     </form>
20. </body>
21. </html>

```

Creating our Edit Script

This script will update our database depending on user input and upon submission. We name this form as **"update.php"**. To create the script, open your HTML code editor and paste the code below after the tag.

```

1. <?php
2.     include('conn.php');
3.     $id=$_GET['id'];
4.

```

```

5.         $firstname=$_POST['firstname'];
6.         $lastname=$_POST['lastname'];
7.
8.         mysqli_query($conn,"update `user` set
firstname='$firstname', lastname='$lastname' where
userid='$id'");
9.         header('location:index.php');
10. ?>

```

Creating our Delete Script

Lastly, we create our delete script and name it as "delete.php". This script will delete the row selected by our user. To create the script, open your HTML code editor and paste the code below after the tag.

```

1. <?php
2.         $id=$_GET['id'];
3.         include('conn.php');
4.         mysqli_query($conn,"delete from `user` where
userid='$id'");
5.         header('location:index.php');
6. ?>

```

Demo

Happy Coding :)

Note: Due to the size or complexity of this submission, the author has submitted it as a .zip file to shorten your download time. After downloading it, you will need a program like Winzip to decompress it.

Virus note: All files are scanned once-a-day by SourceCodester.com for viruses, but new viruses come out every day, so no prevention program can catch 100% of them.

FOR YOUR OWN SAFETY, PLEASE:

1. Re-scan downloaded files using your personal virus checker before using it.
2. NEVER, EVER run compiled files (.exe's, .ocx's, .dll's etc.)--only run source code.

tabledata

Every thing is good but there is a little thing that made the edit and delete links not appear. You forgot to make a td for both of them, other then that it's perfect. Thanks!!
